

Procurements of innovative, advanced systems to support **security in public transport**

Prevent PCP focuses on augmenting the security in public transport by developing an innovative solution enhancing security situational awareness which would timely detect unattended items, associate and track the perpetrators and provide a crisis management system.

With no existing solution addressing that need, Prevent PCP is a research and development project hoping to fill the void. Funding shall be made available through an innovative public tender procedure: **Pre-Commercial Procurement**.

We will answer all your questions during this series of interactive events:

How can you get involved in the project?

What are the technical requirements to address the identified need?

Which funding shall cover R&D expenses?

Under which condition can your project get supported?

Companies looking for partnerships will also present their technologies to address that challenge.

In addition to those events, an **Open Market Consultation** will be held in English on **January 19th and 20th 2022** both online or onsite in Marseille, France. **Join this event** to share your experience as a solution developer and network with companies from across Europe.
